SRN DE-MF-000005588

1 Important Information

Read this Instruction for Use carefully before every application and keep it easily accessible for all users or the respective specialist staff.

Carefully read the warnings marked with this symbol. Improper use of the products may result in serious injuries to the patient, the users or third parties..

2 Scope

The instruments must be used according to their intended use in the medical fields and by respectively trained and qualified staff only. The treating physician and/or user is responsible for choosing the equipment for specific applications and/or operative use, for the appropriate training and information, and for the sufficient experience regarding the handling of the equipment.

3 Products / Intended use

The holding, grasping instruments are intended for surgically invasive and partly also for non-surgically invasive treatments in various specialties of medicine (of less than 60 min.). They correspond to risk class l/Ir.

Product family Forceps		
(Basic UDI-DI) Intended use		
Surgical soft-tissue manipulation	An open-surgery instrument designed to	
forceps 4049216624669A	facilitate grasping and manipulation of soft-tissues	
Ophthalmic soft- tissue manipulation	Instrument designed to facilitate the grasping,	
forceps 4049216626749K	manipulation, or clamping of, and/or removal of foreign bodies from, ophthalmic soft-tissues	
ENT forceps 404921639995AS	A surgical instrument designed to facilitate the grasping, holding, or manipulation of anatomical structures	
Implant handling forceps 4049216350798K	Instrument with blades designed to grasp and manipulate surgical implants/devices (excluding sutures) during implantation	
Dental articulation paper forceps 4049216318137Z	Dental instrument designed for grasping and holding articulation paper during its application to a patient's oral cavity	
Dental dressing forceps 40492163181483	Dental instrument designed for grasping and holding a dental dressing during its application to a patient's oral cavity	
Cilia forceps 4049216634859M	Surgical instrument designed to facilitate the grasping and removal of the cilia (eyelashes)	
Product family Clan		
(Basic UDI-DI)	Intended use	
Intestinal clamp 4049216108717J	Instrument designed for the atraumatic grasping, compression, or support of the intestines during a surgical procedure	
Rectal clamp 4049216156718B	Instrument designed for grasping or compression of the rectum and/or anal	

	procedure
Uterine clamp	Instrument designed to
40492161645386	grasp and/or manipulate
	the uterus during surgery.
Bronchus clamp	Instrument designed to be
4049216108677T	used for the temporary,
	atraumatic compression of
<u> </u>	the bronchus
Pylorus clamp	Instrument intended for
404921646599A4	atraumatic compression of
	the pylorus (the lower
	muscular opening of the
	stomach) during a surgical
5 1 11 1	procedure
Dissection forceps	Instrument for grasping,
4049216158007W	manipulation, compression
	or joining of tissue during
	dissection and/or autopsy
Spermatic cord	Instrument designed for
clamp	the temporary, atraumatic
4049216424688Q	compression of the
	spermatic cord
Product family Clan	nps non-invasive
(Basic UDI-DI)	Intended use
Surgical penile	Instrument wiht the
clamp	intended to stop blood flow
4049216109087G	to the penis.
Umbilical cord	Instrument designed to
clamp	temporarily compress the
4049216108767U	umbilical cord immediately
	after birth.
Towel clamp	Instrument designed to
40492163496196	hold together surgical
	towels and/or drapes, or
	for securing other devices
	such as cables/leads,
	during an operation
Surgical tubing	Instrument intended to
clamp	compress a tube used in
4049216108757S	association with a surgical
	intervention
Circumcision	Instrument designed for
clamp	the controlled removal of
4049216326488H	the foreskin of the penis
.0.02.0020.00	during circumcision
Product family Vaso	
	eriae pulmonales, aorta
	ae, aorta descendens up to the
	ae coronariae, arteria carotis
	otis externa, arteria carotis
interna, arteriae cerebr	ales truncus
	ae cordis, venae pulmonales,
vena cava superior uno	ae cordis, venae pulmonales, d vena cava inferior)
vena cava superior uno (Basic UDI-DI)	ae cordis, venae pulmonales, d vena cava inferior) Intended use
vena cava superior uno (Basic UDI-DI) Vascular clamp	ae cordis, venae pulmonales, d vena cava inferior) Intended use Instrument designed to
vena cava superior uno (Basic UDI-DI)	lae cordis, venae pulmonales, d vena cava inferior) Intended use Instrument designed to directly compress a blood
vena cava superior uno (Basic UDI-DI) Vascular clamp	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to
vena cava superior uno (Basic UDI-DI) Vascular clamp	late cordis, venae pulmonales, dena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary
vena cava superior uno (Basic UDI-DI) Vascular clamp	late cordis, venae pulmonales, dena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding)
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S	Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding)
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure.
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding)
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding)
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator
vena cava superior une (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI)	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI) Open-surgery	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use Instrument designed to
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI) Open-surgery ligation clip applier	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use Instrument designed to apply small atraumatic
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI) Open-surgery	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use Instrument designed to apply small atraumatic clips (not included) for the
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI) Open-surgery ligation clip applier 4049216357989S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use Instrument designed to apply small atraumatic clips (not included) for the ligation of blood vessels
vena cava superior une (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI) Open-surgery ligation clip applier 4049216357989S Applikator für	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use Instrument designed to apply small atraumatic clips (not included) for the ligation of blood vessels Instrument designed for
vena cava superior uno (Basic UDI-DI) Vascular clamp 4049216158828S Artery clamp 4049216108657P Vascular clamp 4049216158828S Bulldog clamp 4049216108687V Product family Clip (Basic UDI-DI) Open-surgery ligation clip applier 4049216357989S	late cordis, venae pulmonales, divena cava inferior) Intended use Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. Instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding) Instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue Applicator Intended use Instrument designed to apply small atraumatic clips (not included) for the ligation of blood vessels

(Basic UDI-DI)	Intended use	
Haemorrhoid	Instrument designed to	
ligator 4049216351578E	deploy a ligature (e.g., a latex rubber band) to	
10 102 1000 107 02	internal haemorrhoids for	
	their removal through	
	blood flow occlusion	
Polypectomy	Instrument used to form a	
endoscopic ligator	ligature loop to prevent or	
4049216361768R	stop bleeding after polypectomy	
Product family Ford		
Product family Forceps (Basic UDI-DI) Intended use		
Surgical soft-tissue	Instrument designed to	
manipulation	facilitate grasping and	
forceps	manipulation of soft-	
4049216624679C	tissues/anatomical	
Middle ear malleus	structures Instrument used to cut the	
nipper	malleus (hammer-shaped	
4049216352137X	lateral bone in the middle	
	ear)	
ENT forceps	Instrument designed to	
404921639995AS	facilitate the grasping,	
	holding, or manipulation of	
Lung forceps	anatomical structures Instrument designed to	
40492161178783	atraumatically grasp,	
	manipulate, or support the	
	lung during a surgical	
12:1	intervention	
Kidney forceps	Instrument designed for	
4049216165198B	grasping and elevating a kidney during a surgical	
	intervention	
Gallbladder	Instrument used for	
forceps	grasping and manipulating	
4049216117827R	the gallbladder during a	
Dragging forces	surgical intervention	
Dressing forceps 4049216348238R	Instrument designed to apply or manipulate a	
4043210040200IX	dressing on tissue during a	
	surgical intervention	
Wire	Instrument to grip, tighten,	
holding/twisting	and/or twist wires during a	
Forceps 4049216328748U	surgical intervention	
Wire	Instrument to grip, tighten	
holding/twisting	and/or twist wires that are	
forceps	being applied to the	
40492163288693	patient during a surgical	
Onon ourgory	intervention	
Open-surgery stone-retrieval	Instrument designed to grasp and/or manipulate a	
forceps	calculus (i.e., a kidney or	
4049216350838A	gallbladder stone) during	
	an open surgical	
Intentin - I f	procedure	
Intestinal forceps 4049216117857X	Instrument for holding/grasping and/or	
7073210111031A	compression of intestinal	
	structures, tissues, and	
	some organs during a	
	surgical procedure	
Haemorrhoid	Instrument designed for	
clamp 4049216108707G	the temporary, atraumatic holding and compression	
7043210100/0/6	of haemorrhoidal tissue	
	during rectal surgery	
Tendon forceps	Instrument designed for	
40492164259794	interlacing, seizing,	
	passing, holding, or approximating a tendon	
	during surgery	
Bone holding	Instrument designed to	
forceps	grasp and hold a bone	
4049216467519J	during an open surgical	
Digid and assessing	procedure	
Rigid endoscopic grasping forceps	Instrument used in endotherapeutic	
4049216371007X	procedures to grasp tissue	
	(usually atraumatically) or	
	foreign bodies	
Tooth extraction	Instrument designed for	
forceps	the extraction of teeth	
4049216355528Q Rubber dam clamp	Dental instrument used for	
forceps	the insertion and removal	

canal during a surgical

Product family Snare Instruments

Holding, Grasping Instruments

40492163585195	
.0.02.00000.00	of rubber dam clamps
Tonsil forceps	Instrument grasping, and
4049216156728D	manipulating the tonsils
	during an ear/nose/throat (ENT) surgical
	intervention, typically
	during tonsillectomy
Tongue forceps	Instrument to facilitate the
4049216108617F	grasping, holding, or
	manipulation of the tongue
	during a surgical procedure
Obstetrical	Instrument intended
forceps, reusable	specifically to assist the
40492163508288	birth of the foetus during
	difficult vaginal births
Cranioclast	Instrument is used for
40492163265084	crushing the foetal head after perforation to
	facilitate the delivery of a
	dead or anomalous
	(abnormal) foetus
Uterine tenaculum	instrument with hooks
4049216139988Y	used for grasping and/or
	manipulating uterine tissue during a surgical
	intervention
Gynaecological	Instrument intended to be
grasping forceps	used for the general
4049216325958M	grasping, pulling, or
	compression of internal
Hyeteroctomy	structures Instrument intended for the
Hysterectomy forceps	grasping, pulling or
4049216358048U	compression of the uterus
	during a hysterectomy
Airway obstruction	Instrument to remove an
forceps	airflow-obstructing object
4049216100586J	or material in the
	oropharynx, trachea, or upper bronchi to prevent
	patient asphyxiation
Airway tube	Instrument used for
forceps	grasping a tube [e.g., a
4049216312647L	catheter or an
	endotracheal (ET) tube] for
	its insertion and/or extraction into/from the
	airways
Orthodontic	Instrument designed to
Forceps	hold small objects or to
4049216332097S	bend or to cut metal strips
	or wire used in orthodontic
Manual	Instrument designed to
orthopaedic	bend orthopaedic devices,
bender	typically those for
4049216447959Q	implantation (e.g.,
	orthopaedic rods, bone
Sterilizer transfer	fixation plates) Instrument designed to
forceps	grasp and handle sterile
4049216117927U	instruments, packages, or
	instruments, packages, or implants, especially
4049216117927U	instruments, packages, or implants, especially directly from a sterilizer
4049216117927U Sterilizing clip	instruments, packages, or implants, especially directly from a sterilizer Product for holding
4049216117927U	instruments, packages, or implants, especially directly from a sterilizer Product for holding instruments for fixation /
4049216117927U Sterilizing clip	instruments, packages, or implants, especially directly from a sterilizer Product for holding
4049216117927U Sterilizing clip	instruments, packages, or implants, especially directly from a sterilizer Product for holding instruments for fixation / protection during reprocessing Instrument with strong,
4049216117927U Sterilizing clip 4049216117927U	instruments, packages, or implants, especially directly from a sterilizer Product for holding instruments for fixation / protection during reprocessing Instrument with strong, curved blades used to

1 Contraindication

The instruments may only be used for their intended purpose by appropriately trained and qualified personnel. The products are not intended for use on the heart and the central circulatory and nervous system.

The products are not intended for connection to active medical devices. There is a risk of injury to patients and users when using RF, RF or laser devices simultaneously.

The products are contraindicated for all other uses except for the techniques mentioned in the intended purpose / indication(s).

Product specific contraindications

Stripper

Varicose vein surgery should not be performed under the following circumstances (contraindications):

- thrombosis
- arterial circulatory disorders
- pregnancy
- primary or secondary lymphedema

5 Complications / Side effect

⚠ General

After contact with the instrument, hypersensitivity reactions can be triggered in a patient with material intolerances to stainless steel. In the event of such a reaction, the procedure must be discontinued immediately and the necessary steps taken.

- Breakage of the instruments
- Injury to vessels, tissue, nerves
- infections
- Perforation of tissue, vessels, and cavities
- After bleeding
- Necroses
- Thromboses

In the course of market monitoring, further potential complications / side effects could be identified:

⚠ Treatment-related complications / side effects / risks

General

- Injury to surrounding vessels and tissues
- Injury to nerves

Clip applicators

- After bleeding
- Permanent epilepsy
- Vascular occlusion with stroke as a consequence

Snare Instruments

- After bleeding
- infections
- Postoperative pain
- Anal/rectal stenosis
- Incontinence
- Wound healing disorders
- Rectal perforation
- Urinary retention
- Recurrence rate

Dental forceps

- After bleeding
- Hematomas
- Injuries to surrounding vessels, nerves and tissue
- Wound healing disorders
- infections
- Damage to the adjacent teeth
- Fracture of tooth roots
- Ankylosis
- Luxation (dislocation of the jaw)

Obstetrical forceps

- Bruising of the child
- Abrasions on the child's head
- Bruises on the child's head
- Nerve damage to the child
- Perineal tear in the mother
- Injury to the urinary bladder and ureter in the mother
- Injury to the pelvic floor in the mother

Holding, Grasping Instruments

Valid from: 11.04.2023 Version: 03

Lowering of the pelvic floor in the mother

ENT head support

- Abrasions
- Nerve lesion
- nerve damage
- Hematoma or edema formation
- Soft tissue damage
- Tissue damage
- Circulatory disturbances
- Eye damage

Extension units

- Burr canal infection
- Dislocation
- Burr canal osteomyelitis

Tendon Stripper

- General risks and complications: Hematoma, wound healing disorder, wound infection, joint infection, deep vein thrombosis, embolism, vascular injury, nerve injury (possibly neuroma formation), complex regional pain syndrome (CRPS, Sudeck's disease)
- Specific sequelae: Restricted motion in OSG and/or USG, renewed instability, persistence of pain, intra-articular scarring (arthrofibrosis), arthrosis
- Nerve injury
- Cyclops
- Infections
- Thromboses
- · Removal of suture buttons

Vein stripper

- Nerve damage
- After bleeding
- Swelling of the legs due to accumulation of lymphatic fluid
- Heavy in the first days
- Injury of vessels (mostly side branch veins)
- Bruises, indurations and bruises
- Infections
- Wound healing disorders
- Thrombosis

Eye magnet

- Infections
- Retinal detachment

Scalp wound clip

- Infections
- Scarring
- Chronic wound healing

Matrix band / rubber dam clamp

- · Tooth injuries
- Risk of aspiration and ingestion of small parts

Impression tray

Dental injuries

Bone approximation clamp

- Joint stiffening
- Tendon adhesion
- Atrophy of muscles, ligaments and cartilage due to inactivity
- compartment syndrome
- Fat clot formation
- Failure of the fracture to heal with formation of a false joint (pseudarthrosis)
- Death of a bone piece (bone necrosis)
- Infections of the periosteum or bone
- Bleeding during or after surgery
- Blood clot formation
- Hemorrhage with possible need for surgical evacuation
- Injury to nerves
- infection of the surgical area
- unaesthetic scarring
- anesthesia incidents
- allergic reaction to used materials (latex, medication)

Absorbent tip applicator/swab

- Infections
- Scarring
- Chronic wound healing

⚠ Product-related complications / side effects /

In the course of market monitoring, further potential complications / side effects could be identified: Forceps:

Breakage

- Remaining pieces
- Injury to the surrounding area (tissue)

Clamps atraumatic:

- Brookana
- Remaining pieces
- Injury to the surrounding area (tissue)

6 Precautions and Warnings

⚠ Attention!

The instruments are designed for surgical use only and must not be used for any other purpose. Improper handling and care as well as improper use can lead to premature wear of the instruments.

⚠ Material intolerance

Under no circumstances must the instruments be used if the user or specialist staff become aware of the patient being intolerant to the material.

⚠ Functional Impairment

Surgical instruments corrode and become impaired in their functionality if they come into contact with aggressive substances. It is therefore necessary to observe the storage and sterilization instructions.

⚠ Operating Conditions

The aforementioned products require correct maintenance and care in order to guarantee that the products operate safely. In addition to this, functionality testing and a visual check should be performed prior to each application. For this reason, please pay attention to the respective chapters in this Instruction for Use.

Should the products be reassembled after disassembly, individual parts must not be replaced with parts from other manufacturers! If the intended purpose of the product entails certain parts being exchanged (e.g. different attachments), no parts from different manufacturers must be used! We recommend to also purchase other accessories (e.g. detergents) at CM Instrumente GmbH.

Λ -

There are no specific storage requirements concerning the products. Nevertheless, we recommend storing medical products in a clean and dry environment.

⚠ Creutzfeldt Jakob Disease

With regard to the reprocessing of medical devices that have been used on patients or suspected patients suffering from or suspected of suffering from Creutzfeldt-Jacob disease (CJD) or its variant (vCJD), the requirements specified in the corresponding appendix of the guidelines for hospital hygiene and infection prevention and the requirements specified by publications in the Federal Health Gazette must be adhered to. The medical devices that were used on this group of patients must be disposed of by incineration (European Waste Catalogue EAK 18 01 03) without risk. Dry heat, ethanol, formaldehyde and glutaraldehyde have a fixing but no inactivating effect on TSE pathogens. Of the sterilization methods available, only steam sterilization (especially 134°C, 18 minutes) has been shown to have a limited effect.

⚠ Pointed / sharp instruments

Care must be taken when handling instruments with sharp points or edges.

7 Combination products & accessories

The products are not applied with other products and are offered without accessories.

B Liability and Warranty

As a manufacturer, CM Instrumente GmbH is not liable for consequential damage resulting from improper use or handling. This particularly applies to use which is not compliant with the defined intended use, or non-compliance with the instructions on preparation and sterilization. This also applies to repairs or changes to the product which are not carried out by authorized staff of the manufacturer. These disclaimers also apply to warranty services.

9 Sterility

⚠ State upon Delivery

Medical products are delivered in a non-sterile condition and need to be prepared and sterilized by the user prior to the first application and any subsequent application according to the following instructions.

10 Reprocessing

⚠ Warnings

- Frequent reprocessing impairs the quality of the products.
- City water to be used must comply with COUNCIL DIRECTIVE 98/83/EC of 3 November 1998 on the quality of water intended for human consumption.
- This treatment instruction specifies the detergents and disinfectants used for validation. If an alternative detergent and disinfectant (RKI or VAH listed) is used, the responsibility rests with the reprocessor.
- Reassemble disassembled products before sterilization.
- Reprocessing may only be performed by qualified medical personnel. Machine reprocessing must be qualified and validated by the user. The washer-disinfectors must fully comply with the requirements of DIN EN ISO 15883.
- ⚠ Use Site

The first steps of a proper reprocessing take place in the operating theatre. Coarse contaminations must be removed prior to storing the instruments if possible. For this purpose, the instruments should be rinsed under cold tap water (<40°C). If this procedure is not sufficient to remove the obvious soiling, a soft plastic brush can be used to remove soiling.

Whenever possible, dry removal (moistened, closed system) should be the method of choice. A drying of any residues should be avoided! Wherever possible, dry disposal is to be preferred, since with wet disposal the prolonged lying of the medical devices in solutions can lead to material damage (e.g. corrosion). Long periods of waiting until the reprocessing, for instance overnight or over the weekend, must be avoided with both types of removal (<60 minutes).

⚠ Transport

The products must be disposed of in a dry state immediately (<60 min) after use, if possible. This means that the products have to be transported in a closed container from the place of application to the purification, so that the products do not dry up.

Preparing the Decontamination

The products must be disassembled prior to the following reprocessing steps and/or must be exposed to the following reprocessing steps in an open condition, where possible. Rinse residue must be avoided. The products must be reprocessed in appropriate screen baskets or rinsing shields (choose size according to product). The products must be positioned in the cleaning basket at a minimum clearance from one another. Avoid overlapping so that the damaging of the products during the cleaning process can be excluded.

Pre-cleaning

- 1. Pre-clean products completely under cold water (city water drinking water quality <40°C) with a soft brush
- 2. Flush cavities and hard-to-reach areas, gaps and slots on the instrument with cold water (city water

Holding, Grasping Instruments

Valid from: 11.04.2023 Version: 03

drinking water quality <40°C) for 60 sec using a water pressure gun.

- 3. Soak products in an alkaline cleaner (0.5 % Neodisher Mediclean forte) in an ultrasonic bath at 35 kHz for 5 min.
- 4. Rinse products under cold water (city water drinking water quality <40°C) for 15 sec.
- 5. Flush cavities and hard-to-reach areas, gaps and slots on the instrument with cold water (city water drinking water quality <40°C) for 30 sec using a water pressure gun.

Cleaning/disinfection

Automated cleaning and/or disinfection process

(Miele Disinfector G7835 CD as per ISO 15883):

- 1 Pre-clean for 1 minute
- Drain water
- · Pre-clean for 4 minutes
- Drain water
- Clean for 6 minutes at 58°C +/- 1°C using 0.5 % alkaline detergent (0,5 % Neodisher Mediclean forte)
- Drain water
- 3 minutes Neutralization (0.1 % NeodisherZ) with cold water
- Drain water
- Clean for 2 minutes with FD water <40°C.

Automated Disinfection

Automated thermal disinfection in a cleaning and disinfection device taking into consideration the national requirements for the A0 value; for instance, A0 value 3000:

< 5 minutes at >95°C

Automated Drying

Automated drying in accordance with the drying operation of the cleaning and disinfection device for at least 30 minutes at 92°C +/- 2°C.

11 Sterilization

(Typ B Autoclave by Tuttmauer as per DIN EN 13060

Sterilization of products with a fractionated prevacuum method (according to DIN EN ISO 17665-1) taking into consideration the respective national requirements. The sterilization of the products must be conducted in suitable sterilization packaging according to DIN EN ISO 11607-1 and EN 868.

The sterilization must be completed using a fractionated pre-vacuum method with the following parameters:

- 134°C,
- 5 minutes hold time
- 3 pre-vacuum cycles
- Drying in vacuum for least 20 minutes

The Instruction for Use of the manufacturer of the autoclave and the recommended directions for maximum loading with goods to be sterilized must be observed. The autoclave must be installed, maintained, validated and calibrated in accordance with requirements.

⚠ Additional Information

The reprocessor is responsible for ensuring that the actual reprocessing, including the used equipment, materials and the staff involved in the reprocessing facility, achieves the desired results. This typically requires the validation and routine monitoring of the method and the equipment used.

12 Maintenance-Control-Inspection

Cool down the instruments to room temperature!

Visual inspection (before assembly):

Check the surface of the instruments or the individual components before assembly. Pay particular attention to checking joints (final part), profiles, grooves and other structures that are difficult to access:

- Is there any residual soiling or residue? If so, manual re-cleaning and renewed complete mechanical cleaning and disinfection.
- Are traces of corrosion (rust, pitting) visible?
- Is the surface damaged by cracks (including hairline cracks) or other signs of wear?
- Is the instrument labeling no longer legible?

If so, the instrument in question must be marked and immediately sorted out and replaced.

Assembly and maintenance

- Assemble the disassembled instruments in a functionally correct manner.
- Treat moving parts, such as joints, threads and sliding surfaces, manually with suitable, medically approved instrument oil (steamsterilizable care product based on paraffin/white oil, biocompatible according to EU standard). EU standard)
- Distribute the oil in the joint by opening and closing several times, remove excess care product with a clean, lint-free cloth

Do not use mineral oil or silicone lubricant! Do not immerse instruments completely in the care product! Function test

During the functional check, pay particular attention to the following aspects and possible malfunctions:

- No damage, such as broken tips, bent or loose parts (screws)
- Proper closure of jaws
- Correct and safe function of detents and locks
- Easy and even movement of handles, as backlash-free as possible
- Proper cutting function of shears
- Re- and spring pressure in order (punches, gouge pliers etc.)
- Continuity of lum
- No other signs of wear, e.g. on seals, insulation or coatings

If defects are found during the functional test, the instruments must be marked and excluded from further use without fail.

13 Lifespan of the Products

The service life of the products results from their function, gentle reprocessing in accordance with these instructions and careful handling when handling the instruments. Therefore, a limit to the number of reprocessing cycles cannot be set across the board. Nevertheless, 100 reprocessing cycles were simulated, which showed no impairment of functionality, biocompatibility and identification of the products. The user recognizes the end of the usage cycle by the possible defects and limiting properties of the products indicated under maintenance, inspection and testing

14 Service and Repair

⚠ Service and Repair

Do not carry out any repairs or changes to the product yourself. Authorized staff of the manufacturer are solely responsible for such work. Should you wish to make complaints or queries, or offer us any advice regarding our products, please feel free to contact us

⚠ Returns

Defective or non-compliant products must go through the entire reprocessing process before being sent back for repairs/service.

15 Packaging, Storage and Disposal

Standard packaging of the products for sterilization according to ISO 11607 and EN 868.

Store sterile products in a dry, clean, and dust-free environment, secured against damage, at moderate temperatures.

The medical products of the manufacturer should be stored and kept in single packaging, boxes or protective containers. Please handle the instruments with care during transportation, storage and reprocessing. The user and/or specialist staff intended for this is responsible for ensuring that the sterile state is maintained after the sterilization.

The disposal of the products, packaging as well as the accessories must be performed in accordance with current rules and laws. No specific instruction regarding this matter is provided by the manufacturer.

16 Reporting obligations

Product defects which have occurred during proper use of our products should be reported directly to us as the manufacturer or to your supervising specialist dealer.

Defects in which patients, users or third parties have been harmed by the products (so-called reportable incidents) must be reported immediately to the manufacturer and, if necessary, to your competent, responsible authority. This reporting of incidents must take place immediately after they occur so that important reporting deadlines can be met. The affected products must be discarded, reprocessed and sent to the manufacturer for examination. Your servicing dealer will be pleased to help you with this. After receipt of your notification, we will inform you within a reasonable time frame about the further measures required.

17 Additional information

If the chemicals and machines described here are not available, and if the reprocessing process cannot be carried out as described, it is the user's responsibility to validate his process accordingly.

Further information on the reprocessing of medical devices:
